

OXYGENATE YOUR BLOOD!

For a deep cleaning, choose the oxygen-ozone therapy!
The therapy is done with an autohemo-infusion and gives energy to the whole organism.

The Auto-hemo Infusion benefits with the use of the SANO3 kit: no phthalates released and no hyperbarism, which produces haemolysis (breakdown of red blood cells).

Asphyxiated skin with impurities. Swollen belly and bad breath. Intense fatigue. These are all signs of "intoxication syndrome", typical of those who smoke, or lives in a high-concentration zone of smog or has taken antibiotics or cortisone for a long period. "The whole treatment is performed with a gas mixture of oxygen and ozone infused with so-called 'big Autohemo'" says Professor Marianno Franzini, president of the Italian Society of oxygen-ozone therapy, and teacher of this technique at the University of Pavia. "In the ambulatory, 150 cm³ of blood are taken from the arm and it is enriched by the benefits of the gas couple (the ozone is nothing more than a 'super-oxygen' with one atom more) and it is reinfused through the same venous access.

The blood is enriched with pure oxygen as after a stay at high altitude and it is cleansed of waste and heavy metals (even absorbed through the water or hair dyes) gives energy to the whole organism, which becomes more resistant to stress. A study of 2013 conducted on 48 patients who underwent 15 sessions twice a week, also shows that this lower cholesterol and CRP, the index of inflammation often linked to a state of chronic intoxication.
